

STORE MANAGEMENT SOFTWARE

PRODUCT BROCHURE

Centralized Inventory, Stores, Job Work, Returns, Valuation and Management Reporting

27 Operational & Management Reports	0-3 Item-wise Qty Decimal Precision	FIFO + WA Flexible Valuation	PDF / Excel Professional Outputs
---	---	--	--

Built for practical day-to-day store control with a central Access database, multiple plants/branches, live stock visibility, job-work tracking, invoice/CN reconciliation, opening controls, audit-friendly corrections and management analytics.

A Product of My Excel Solutions Pvt Ltd

Delivering Excellence Beyond Expectations

1. Complete Reports - Reports Page-1 + Report Page-2

All reports are listed first so management, and users can immediately see the information available.

Reports Page-1 contains the four core stock/control reports. Report Page-2 contains operational, analytical and management reports.

No.	Report	What it tells you
1	Minimum Stock Alert	Items at/below configured minimum level for reorder or shortage follow-up.
2	Challan Pending Report	Supplier challans still pending for final invoice reconciliation.
3	Stock Ledger	Chronological inward/outward movement with stock context.
4	Periodical Stock Position	Quantity and valuation for selected period/location/ownership/basis.
5	Branch Transfer Register	Stock movement from one plant/location to another.
6	Challan Clearance Register	Quantities cleared from supplier challans against final documents.
7	Challan Register	Challan qty, cleared qty, pending qty, rate and pending value.
8	Consumption Analysis	Gross issue, UNUSED return and net consumption with grouped views.
9	Customer Job Work Material - Pending Return Alert	Customer-owned material pending return beyond configured days.
10	Customer Job Work Movement Register	Customer material inward and return movement history.
11	Customer Job Work Pending	Customer-owned material received, returned and still pending.
12	Internal Return Register	UNUSED, REUSABLE and SCRAP returns linked to original issue.
13	Inventory Ageing Analysis	Ageing buckets with quantity, valuation and management summary.
14	Inventory Turnover / Stock Utilisation	Opening, purchase, utilisation, closing, average inventory, turnover and days held.
15	Inward Register	Purchase, transfer receipt, job work receipt, internal return and other inward history.
16	Job Work Material Sent - Pending Return Alert	Vendor/job-worker material pending beyond configured days.
17	Job Work Movement Register	Operational job-work issue movement for selected period.
18	Job Work Pending	Opening and operational quantities still pending with job workers.
19	Job Work Receipt Register	Receipt history against job-work issues/opening job work.
20	Outward Register	Self-consumption, sales, transfer, purchase return and other outward history.
21	Outward Valuation Analysis	Book value/valuation view of outward transactions with sales consideration where relevant.
22	Purchase Analysis	Gross purchase, purchase return and net quantity/value with grouping views.
23	Purchase Return Clearance Register	Purchase-return challan reconciliation against final supplier Credit Notes.
24	Purchase Return Register	Purchase return transaction history.
25	Slow / Non-Moving Stock Analysis	Active/slow/very slow/non-moving/never moved classification using configured days.
26	Stock by Location / Branch	Current quantity and valuation by location, ownership and item.
27	Store Issue Register	Issue register with valuation rate and issue value for active rows.

Report flexibility - PDF / Excel where supported, active filters shown in headings, unit-safe totals and valuation basis displayed where relevant.

1.1 Complete Report Visual Gallery - All 27 Reports

Representative outputs of every report in the software. The gallery shows the report style, headings, filters and information layout; actual records vary by customer data and selected filters.

1. Minimum Stock Alert

Foundation & Configuration

Feature	Business benefit / capability
Central Access Database	One connected database keeps masters, settings, transactions and reports on the same data source.
Multi-user LAN Deployment	A shared database can be used by multiple authorised operators on the local network.
Multiple Plants / Branches	Maintain stock location-wise, configure plant mode/default plant and transfer stock between branches.
Item Master with Grouping	Item Group, Sub Group, Base Unit, minimum stock level and quantity precision maintained item-wise.
Item-wise Quantity Precision	Each item can use 0, 1, 2 or 3 decimal places; analytical reports may display up to 3 decimals.
FIFO Valuation	FIFO available where the valuation/report option is selected or configured.
Weighted Average Valuation	Weighted Average can be the company default for stock and analytical reports.
Live Available Stock	Relevant entry screens show available quantity before Save, with final save-time stock validation.
Minimum Stock Alert	Maintain item-wise minimum stock level and identify items at/below the threshold.
Master Import / Export	Download Excel templates, bulk import masters and export the current master list.
Opening Migration	Bring opening stock, pending purchase challans, opening job work and reusable balances into the database.
Opening Finalisation	Lock verified opening migration before normal live operations begin.
Opening Correction Chain	Correct finalised opening without overwriting the original source; validate and reverse latest correction where allowed.

Complete Feature Set - Daily Store Operations

Purchase, reconciliation, issue, sales, branch movement, job work and returns.

Inward / Outward Operations

Feature	Business benefit / capability
Purchase Inward - Invoice / Challan	Record purchases against invoice/challan with supplier, item, quantity and rate.
Landed Cost Handling	Basic rate, common expenses, landed cost per unit, total landed cost and bill total support purchase valuation.
Purchase Invoice Reconciliation	Link purchase challans to final invoices and track linked/pending quantity.
Purchase Return	Return company-owned material to suppliers and generate Purchase Return documentation.
Purchase Credit Note Reconciliation	Link Return Challans to supplier Credit Notes and track linked/pending quantity.
Branch Transfer	Transfer material between locations with linked source/destination stock effect and dedicated register.
Self-Consumption / Store Issue	Issue stock to department/machine/use-purpose and analyse gross issue, returns and net consumption.
Sales Outward	Record customer/buyer outward with reference, quantity and sale consideration.

Job Work, Returns & Reusable / Scrap

Feature	Business benefit / capability
Vendor Job Work	Send material to job worker, receive partially/finally, track pending quantity and return alerts.
Customer Job Work	Receive customer-owned material separately from Owned stock and return it against original inward references.
Internal Return - UNUSED	Return unconsumed material against original issue and reduce net consumption.
Internal Return - REUSABLE	Move returned material into a separately tracked reusable pool.

Internal Return - SCRAP	Classify returned material as scrap while retaining source linkage.
Reusable / Scrap Tracking	Keep reusable/scrap balances separate from normal Owned inventory.
Pending Return Alerts	Configurable alert days for vendor job-work and customer job-work pending material.
Audit-friendly Source Linkage	Job-work receipts, internal returns and customer returns remain linked to original source transactions.

2.1 Challan Mapping / Final Document Reconciliation

Challan Mapping is now consolidated in the Invoice / CN Reco tab. Use this control when stock has already moved on a Purchase Challan or Return Challan and the supplier's final Invoice / Credit Note arrives later.

Workflow	Control logic
1. Record source challan	Purchase Inward on Challan, or Purchase Return on Return Challan, creates the one physical stock movement.
2. Enter final document	Open Invoice / CN Reco and enter the supplier Invoice / Credit Note details.
3. Match pending source	Matching Pending Challans shows eligible source challans for the selected supplier and item.
4. Tag Link Qty	Link full or partial quantity. Challan Linked Qty and Unreconciled Qty remain visible.
5. Save / update later	PARTLY RECONCILED documents can be completed later through Update Reconciliation with reason; FULLY RECONCILED ends at zero pending qty.

Core rule: the final Invoice / Credit Note is linked to the original challan movement and must not create a second inward or outward stock quantity.

Source Purchase Challan - the original stock inward that will later be reconciled to the final Invoice

Purchase Invoice Reconciliation - Screen

Material is received on a Purchase Challan first. When the supplier Invoice arrives, the final document is linked to that existing source challan instead of posting another purchase inward.

Purchase Invoice Reconciliation - final Invoice linked to matching pending Purchase Challans

Control	Business benefit
One stock movement	Purchase Challan creates the physical inward. Final Invoice reconciliation does not create a second inward.
Partial reconciliation	Link only the quantity covered now; the balance remains visible as Unreconciled Qty.
Later completion	Load the saved final document and use Update Reconciliation for the remaining quantity with a reason.
Control reports	Challan Pending, Challan Register and Challan Clearance Register provide the audit trail.

2.2 Return Challan - Supplier Credit Note Reconciliation

When material is returned to the supplier before the Credit Note is available, the Purchase Return is recorded once on Return Challan. The later Credit Note is tagged to that Return Challan in the same Invoice / CN Reco screen.

Purchase Credit Note Reconciliation - matching Return Challan and unreconciled quantity remain visible

Store Reconciliation - CP7

Final Document saved successfully.

Document No.: CN-GUIDE-01
 Reconciliation Status: FULLY RECONCILED
 Challan Linked Qty: 1.000
 Unreconciled Qty: 0.000

No second stock movement was created.

OK

Full reconciliation confirms zero unreconciled quantity and no second stock movement

Why it matters: linked challans, PARTLY / FULLY RECONCILED status, reason-based updates and source-linked reports replace disconnected manual clearance tracking while keeping stock quantity correct.

Complete Feature Set - Controls, Documents & Analytics

Control changes, generate documents and convert transaction data into management information.

Control & Management Features

Feature	Business benefit / capability
Edit / Update with Reason	Load existing transaction before editing and record the reason for audit.
Controlled Cancellation	Cancel with reason instead of deleting transaction history directly from the database.
Transaction Notes / PDF	Generate inward, outward, job-work, internal return, transfer, opening and clearance notes.
Excel and PDF Reports	Generate reports in Excel/PDF as supported, with active filters shown in report heading.
Stock Ageing / Slow Moving	Analyse receipt age, movement class, stock value and management summary.
Turnover / Utilisation Analysis	Review opening, purchases, utilisation, closing, average inventory, turnover ratio and days held.
Consumption Analysis	Gross issue, UNUSED returns and net consumption with overall/month-wise/grouped views.
Purchase Analysis	Gross purchase, purchase return and net purchase quantity/value with grouping options.
Outward Valuation Analysis	Review outward book value, valuation rate and sale consideration where relevant.
Configurable Movement Classification	Maintain Active / Slow / Very Slow day limits; above Very Slow becomes Non-Moving.
Configurable Pending-return Alerts	Maintain separate follow-up days for vendor and customer job-work pending material.
Professional Report Rules	Unit-safe totals, Indian value formatting and clean filter headings improve usability.

Practical operator design - dropdown-based selection, visible stock, clear New / Load / Update / Cancel actions and downloadable Excel templates reduce dependence on technical training.

3. Management Visibility - Questions the Software Helps Answer

From operational control to ageing, utilisation, valuation and pending follow-up.

Management question	Where to see it
What stock do we have - and where?	Stock by Location / Branch, Periodical Stock Position and Stock Ledger.
Which items need reorder attention?	Minimum Stock Alert.
What is pending against supplier challans?	Challan Register, Challan Pending Report and Challan Clearance Register.
How much material is still with job workers?	Job Work Pending, Receipt Register and Pending Return Alert.
How much customer-owned material is pending?	Customer Job Work Pending and Movement Register.
What is actual net consumption?	Consumption Analysis compares gross issues with UNUSED returns.
Which stock is ageing or not moving?	Inventory Ageing and Slow / Non-Moving Stock Analysis.
How efficiently is inventory being used?	Inventory Turnover / Stock Utilisation.
What is the value of outward movements?	Outward Valuation Analysis.
What did we purchase net of returns?	Purchase Analysis.

4. Software Kit, Implementation Flow & Deployment

A ready-to-use package supported by templates, sample transactions and detailed documentation.

What Comes in the Kit

Feature	Business benefit / capability
Store Management Software EXE	Main operator application.
Inventory Database (ACCDB)	Central database for masters, settings and transactions.
Detailed User Guide	Step-by-step self-learning operating guide.
Product Brochure	Quick overview of reports and capabilities.
Templates Folder	Master and opening-balance import templates.
Sample Transaction Excel File	Practice/testing entries for purchase, issue, returns, transfers and job work.

Recommended Implementation Flow

Step	Process	Outcome
1	Connect EXE + Database	Confirm correct connected database and shared folders.
2	Create / Import Masters	Items, units, groups, branches, suppliers, buyers and job workers.
3	Load Opening Data	Opening stock, challans, job work and reusable balances.
4	Verify & Finalise Opening	Reconcile opening reports before go-live.
5	Start Daily Transactions	Purchase, issue, sales, transfer, job work, returns and reconciliations.
6	Review Reports	Use stock, pending, valuation, ageing, consumption and management reports.

Designed for a shared LAN environment with one connected database and consistent reports across authorised users.

5. Why Choose Store Management Software?

A practical control system for stores teams, finance, operations and management.

Better stock visibility

Know quantity and value by item, branch, ownership and transaction history.

Fewer manual reconciliations

Source-linked transactions and central reporting reduce disconnected Excel tracking.

Safer corrections

Finalised opening data is corrected through a traceable correction chain rather than direct overwriting.

Management-ready analytics

Ageing, slow-moving, turnover, consumption, purchase and outward valuation support decisions.

Stronger pending control

Follow supplier challans, job-worker material, customer-owned material and return clearances.

Flexible valuation

Use FIFO or Weighted Average according to configured/report requirements.

Operator-friendly setup

Downloadable templates, sample transactions and a detailed self-learning guide support faster implementation.

Audit-friendly history

Edit/update/cancel reasons and source linkage make transaction changes easier to explain.

6. Protected Deployment, Licensing & LAN Expansion

One Primary application supports both single-PC use and future LAN expansion, with protected EXE delivery and separate activation for each additional LAN Client.

Deployment Option	How it Works	Customer Benefit
Single-PC Use	Activate Store Management Software on the Primary computer and use the local Access database. LAN setup is not required.	Simple first installation with no unnecessary network steps.
LAN Expansion	Use the same Primary software, configure the shared Access database, install the LAN Server Component, and activate Store Management Software LAN on each additional computer.	Upgrade to LAN later without replacing the Primary software.
Protected EXE Delivery	Primary and LAN applications are supplied as XLS Padlock protected EXEs with activation control.	Commercial deployment without distributing the XLSM source workbook.
Safe License Deactivation	A Deactivate License option is available when a licensed computer must be replaced or moved.	Controlled transfer of the licensed installation; LAN authorization stops when the Primary license is deactivated.

LAN Authorization Flow

1. Primary	2. Configure LAN	3. Server Component	4. Additional LAN PC
Activate Primary license	Select the shared Access database; the software converts the path to UNC where applicable.	Install the background LAN Server Component on the Primary/Server computer.	Activate the separately supplied Store Management Software LAN Client.

Commercial model: For LAN users only - each additional computer requires its own activated Store Management Software LAN Client. A valid Primary license and an active LAN Server Component are required for LAN operation.

Operational Safeguards

- The LAN Server Component runs independently in the background; the Primary application does not need to remain open continuously for heartbeat updates.
- LAN authorization files are managed automatically and should not be edited, renamed or copied between products.
- The shared Access database remains the central data source for authorised LAN users.
- Single-PC customers can purchase LAN Client licences later and convert the existing installation to LAN use.

Store Management Software combines day-to-day inventory control, central data, protected deployment and a practical upgrade path from one computer to multiple LAN users.
